

McAfee® SaaS Web Protection

30-40% of Internet browsing is non-job related.

SANS INSTITUTE

It's clear that the Web has opened the door to infinite business opportunity. At the same time, however, it has created a swift entryway for infection, malicious infiltration and corporate risk.

McAfee offers proactive protection against emerging web-based malware attacks with SaaS Web Protection. With our simple, feature-rich perimeter protection, you gain effective and economical control over unauthorized, unproductive workplace Internet access and bottom line cost savings.

One in ten webpages scrutinized by search giant Google contained malicious code that could infect a user's PC.

BBC News May 2007

Create a more safe and secure network

More practical than completely blocking employee Internet access, the SaaS Web Protection solution works at the network perimeter to help you foster a more productive and secure online experience. Our Web filtering and defense service:

- Works at the network perimeter to protect the company, employees and network assets from spyware, viruses and phishing attacks
- Allows greater management control over unauthorized, unproductive workplace Internet usage with group policies and content control
- Provides continuous updates for real time protection
- Allows control over bandwidth-intensive applications

Savings comes standard with our security

Are you looking to save time? How about money? Or, maybe you're trying to do all these things while also saving your company from the debilitating effects of malware. Web Protection is your saving grace that allows you to:

- Reduce costs and IT aggravation associated with malware-infected PCs including clean-up and replacement
- Conserve network bandwidth
- Eliminate the purchase and maintenance of additional hardware or software
- Reduce wasted IT and employee time and productivity

Automatic protection eliminates uncertainty

With limited administration and effort, you gain peace of mind knowing that your employees and corporate assets are protected with a reliable and dependable managed service. This value translates into:

- Greater employee productivity by eliminating unauthorized Internet usage
- Advanced protection that reduces liabilities associated with compliance breaches
- More time for your IT staff to focus on core projects because the service helps reduce time-consuming PC clean-up and maintenance
- Increased network bandwidth availability and less data bottlenecks

Simply effective web defense

- Several offerings, including Security Suites, to provide flexible control
- Around-the-clock protection and free, real-time updates
- Scalable solution to suit your business needs and demands
- Purchasing flexibility with month to month contracts and no additional fees
